eDCase**MAN** 2.0

First of its kind eDiscovery workflow tool that tracks the end-to-end process. Capturing/guiding all human interaction before data preservation and collection. Fitting the smallest forensic teams and scales up to the largest eDiscovery departments. Built to enhance your managed services and giving you case statuses on our dashboards. Combined with a fully predictable cost model.

Full eDiscovery project management

eDCaseMAN offers complete eDiscovery Project Management no matter how complex your customers internal processes may be. We are able to adjust depending on their needs and requirements. Within just a few minutes of work we will be able to make changes on the fly or even create an entire process from scratch. The software will blend into your daily work load seamlessly.

Instant dashboards

eDCaseMAN offers real time dashboards giving you and your customers full overview of all your cases. Always keeping everybody involved on top of things enabling informed decisions making. Independent of how many cases you have you can always drill down to the information you require.

Full chain of custody

eDCaseMAN documents every step in the process from the initial legal request till completion of data collection. **eDCaseMAN** will always have a full COC available enabling you to put it forward shall you be required to do so.

Managed service extension

eDCaseMAN can be configured to meet your clients needs and how they should be involved, as a managed service or on-premise. Give the customers real-time status access and involve them where most efficient which of course is possible to modify over time to accommodate workload and organisation.

eDCaseMAN workflow scale up and down

The software workflows and roles are totally flexible and will increase or decrease in complexity to fit the current environment of your customer. **For smaller teams** a simplified but still best practice orientated process has been marked in grey in the bellow icons. A full e-Discovery Collection lifecycle, marked in green, especially designed **for large in-house eDiscovery teams** ensures your team is as efficient as it can get. No matter your situation eDCaseMAN will support your needs.

e-Discovery best practice workflow

1 Request creation

2 Request On-boarding

3 Custodian Scoping

4 Custodian Investigation

5 Order generation

6 Order management

Specifications

Independent of how you deliver the e-Discovery services to your customers, **eDCaseMAN** supports everything done prior the data collection process from A to Z. Can be offered as a managed private cloud solution, offering a simple but controlled and documented process, assuring chain of custody and can be integrated into any existing down-stream services if required. **eDCaseMAN** can also be implemented on-premise and accommodate the existing maturity level. As an example you can start simple and grow into a more mature e-Discovery operational model, if this is your long term goal. You hereby have the chance to migrate from a more manual and tactical solution into a more integrated strategic solution.

eDCaseMAN enables your customers to gain up to 30% cost savings by scoping and validating your custodians and the requested data types before you execute the actual collection of the data. You hereby raise the defensibility of your cases enabling you to deliver information about the time it takes to collect based on location, date range and data types and only collect really relevant data.

eDCaseMAN does not require you to have a major technical environment. It's a virtual appliance which simply needs access to an SMTP Server to be able to send out emails triggered in the workflow. It can be put behind as many firewalls as you would like or in a secure cloud environment, totally flexible and depending on your needs.
